IN Your Future

Equipping. Enabling. Inspiring.

On our Relays

Hardly any sector of the working or living space can exist without modern relay technology today. Panasonic Industry meets the various needs with a broad range of innovative and economical relays series.

After more than 40 years of experience at the forefront of relay innovation and development, Panasonic Industry today offers a portfolio of more than 2,000 electromechanical relay versions in the field of miniaturized relays - from ultra-miniature SMD signal relays to robust, compact industrial high power types.

With our new short form we'll invite you to gain a quick and comprehensive overview on our new relay portfolio: our endurance runners, our innovations – and for sure the ones that suit your project.

About Panasonic Industry

As established part of the global Panasonic Corporation with long-grown and European relationships we strive for continuous innovation and share the company's overarching purpose: **Shaping the future for the better.**

To take your ideas to the next level, we at Panasonic Industry research, develop and produce technologies and components for a vast range of industries.

From full-custom batch-size 1 factory automation devices to next-gen electronic and electromechanical components manufactured in billions of units, our clear focus on innovation, performance and reliability sets the bar high in multiple market sectors – and trends.

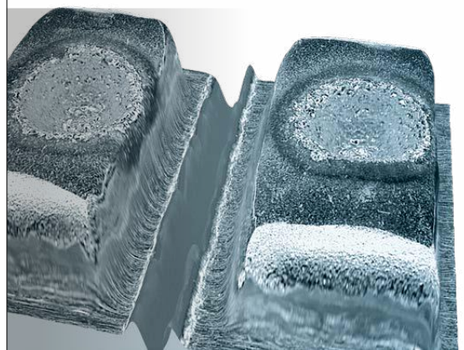
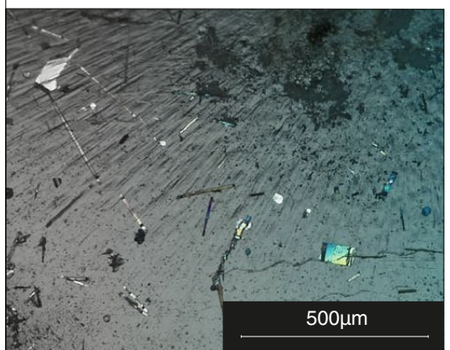
DOES THIS RELAY SUIT MY IDEA? AND IF NOT - WHICH ONE DOES?

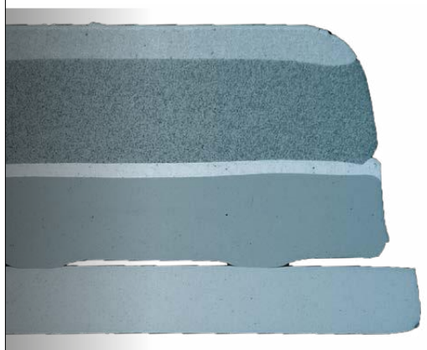
Albeit the standard relay datasheet covers more than 80% of all applications, the paper can only cover a certain scope of values and parameters, mostly concerning worst case scenarios, for example in terms of temperature.
When it comes to specific requests like switching 8A with a 6A relay, our laboratories in Germany are able to support you. Our engineers do not only perform lifetime tests but provide you with an in-depth view at the application parameters. In almost every case, there is a relay that fits your project, even if the datasheet wouldn't reveal it in the first place.

IS IT POSSIBLE TO SWITCH 8A WITH A SLIM 6A RELAY?

Application support is then followed by the analysis part: Continuous tests during production will ensure a high and constant quality level.
When it comes to lifetime or customer related investigations, latest technology shows results about the condition, wear-out or remaining lifetime of relays.Finally, we encourage our customers to address our support in case of questions and claims. Resorting to many decades of experience, the reason of a relay fault is mostly found not the in the relay itself, but in the context of improper component decision or external factors like overcurrent, mechanical stress or hazardous materials.







Industrial Relays

Proven, reliable, innovative and energy-efficient switching solutions

We find ourselves already in the midst of the next industrial revolution, which is not only a question of visions and ideas - but also of nex-gen reliable and efficient components making a true difference in daily operations.

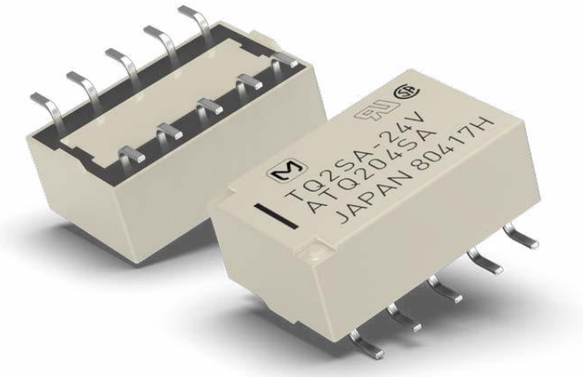
Get a glimpse on what Panasonic Industry has to offer in its latest portfolio of industrial relays – from circuit board connection types to plug-in or screw terminals, from low-level load switching to double-digit ampere values. Discover the variety of industrial switching.

Load switching capability ranges from low-level signals to double-digit ampere values.

Various connection types such as circuit boards, plug-in or screw terminals offer a large variety of options that are tailored to your application.

...NO MATTER IF YOU‘RE AIMING
FOR HIGH VOLTAGE ROBUSTNESS
OR LOW COIL POWER LOSS.

Signal Relays



With a compact size and switching capability up to 2A, signal relays are used in a wide field of communication and security applications as well as in lighting, measurement or automation equipment.

Galvanic separation between control and load circuit and ruggedness against high inrush or voltage peaks (overload) makes them an ideal choice for any kind of application.

Even battery-driven or energy harvesting applications can benefit from the modern latching technology all signal relays offer. Power is only needed for few hundred milliseconds during on- or off-switching, in between the relays needs no energy to keep the state.

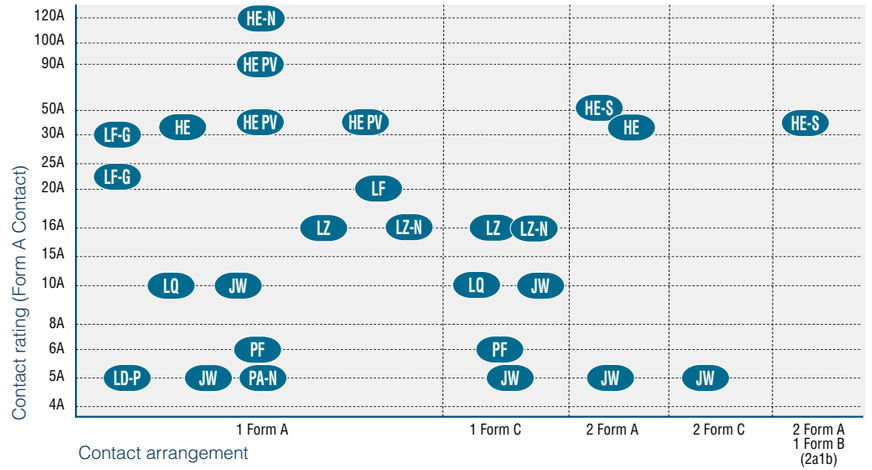
Power relays - the backbone of applications in countless contexts.
There are clear trends towards high power handling directly on the PCB – and towards polarized relay technology for low or (for the latching types) even zero energy consumption.

Power Relays

Non polarized type power relays



Polarized type power relays (with latching)

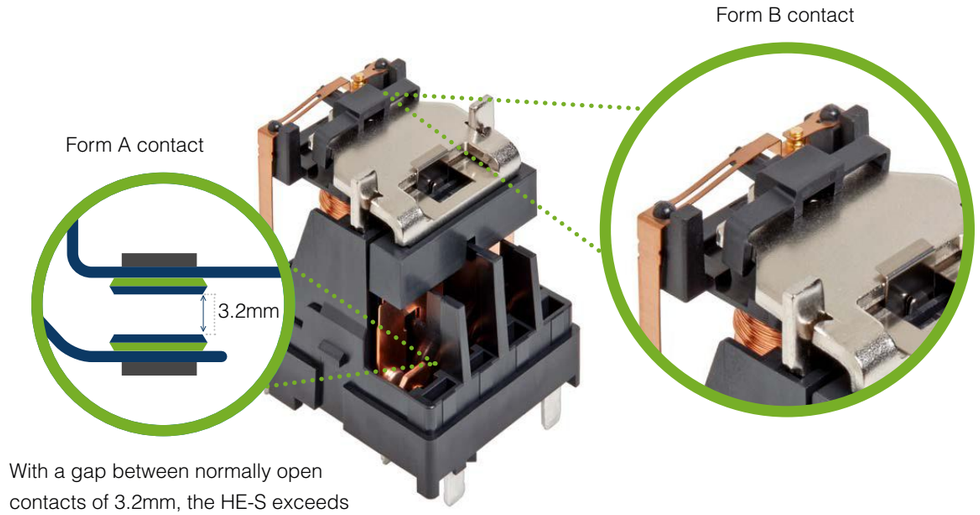
“

EXTREMELY LOW POWER DISSIPATION AT THE CONTACTS IS ACHIEVED BY REDUCING THE CONTACT RESISTANCE DOWN TO 0.4MΩ.

High Capacity Relays

Our energy grid is changing. Decentralized power generation like wind engines or solar panels on each building require new ways to handle and distribute the current that keeps our modern life running.
In addition, e-mobility solutions bring high power applications to each and everyone. To miniaturize this technology - and to make it affordable, HE relays are designed to bring the high power handling on the PCB – without wiring, with improved reliability and low power losses.



With a gap between normally open contacts of 3.2mm, the HE-S exceeds mandatory regulations.

ALL SAFETY RELAYS COMPLY
WITH EN 61810-3

Safety Relays

In relays designed according to the standard EN 61810-3, the contacts are interconnected in such a way that in case of failure, e.g. when a load contact for a motor welds, the corresponding forcibly guided contacts are blocked. Redundancy in the circuit can, for example, allow a motor to be shut off whereby the blocked contact prevents the motor from being turned on again because the release circuit is not closed.

What this boils down to is, that relays with forcibly guided contacts are usually power relays with several NO (1a) and NC (1b) contacts (minimum 1a1b) that comply with the relay standards EN 61810-1 and EN 61810-3. This technology guarantees defined and hence safe operating conditions in the event of a failure.

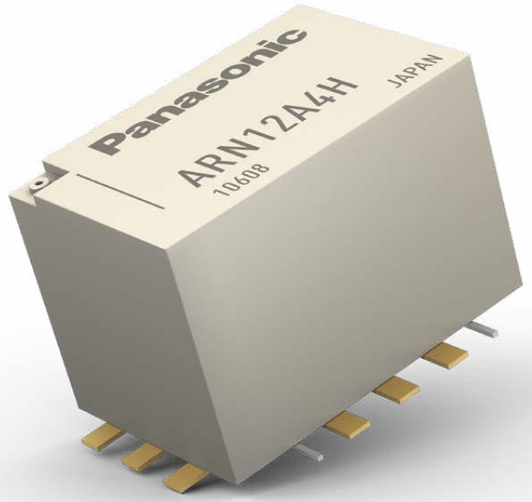
High Frequency Relays

Microwave devices can be classified into relays and coaxial switches which handle high frequency signals above several 100MHz. These devices are frequently used in the field of test and measurement equipment, wireless devices and base stations. Panasonic Industry has a wide range of relays and coaxial switch products for various frequency bands. Features include low insertion loss, high isolation, and low VSWR for impedance matching.



Industrial Relays I High Frequency Relays

Semiconductor Relays

Maximum service life - many application purposes

Panasonic Industry offers a wide range of PhotoMOS® relays for use in telecommunication, measurement, security devices and industrial control.

The power MOSFET's output acts as a pure ohmic resistance thus distinguishing the PhotoMOS® from an optocoupler or triac solution, since no saturation voltage or offset voltage is required.

PhotoMOS® relays with a MOSFET output enjoy an almost unlimited lifetime if used according to the specifications. Moreover, they are extremely reliable, unaffected by vibration, and their On-resistance remains stable throughout their entire lifetime. In addition to our broad product line-up for the industrial market, automotive-qualified types are also available.

Automotive Relays

All Panasonic Industry Automotive relays comply with ISO / TS 16949.

Panasonic Industry has been contributing to the ever increasing need for innovation in transportation electronics for decades, with highly reliable, long lasting devices for transportation safety, comfort, entertainment and powertrain applications. There is continued effort within the transportation industry to balance societal and economic perspectives with the environment.

Panasonic Industry continually supports these efforts with proven quality, a solid manufacturing organization and experienced engineering talent.

Automotive Relays I PCB Relays

Series	Features	Coil	Mounting (bottom view)
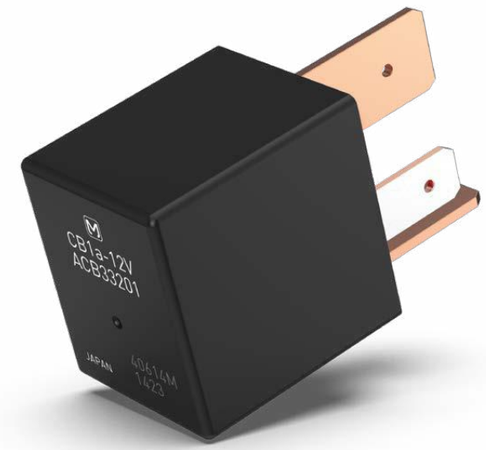
TH  11.0 x 12.0 x 8.8mm 1c  21.6 x 12.0 x 8.8mm 1c x2 (Twin)	» Ultra compact flat type » High switching capacity (up to 25A) » 10 terminals twin type 20A N.O. 10A N.C. 16V	12V DC 900mW (for pick-up max. 6.5V DC) 655mW (for pick-up max. 7.7V DC)	SMD SMT  Go To Overview



Plug-in Relays

Panasonic Industry provides high-performing micro and mini ISO plug-in relays suitable for 12V and 24V power supply systems.

Automotive Relays I Plug-in Relays

Series	Features	Coil	Mounting (bottom view)
CA  21.5 x 14.4 x 37.0mm 1a 1b 1c	» Rubber bracket / screw mounting » Direct plug-in		Plug-in  1a, 1b
	Standard 30A 1a / 20A 1b, 1c / 15V 1c / 16V 1a, 1b	12V DC 1,800mW	
	Type S 20A N.O. / 10A N.C. / 16V	12V DC 1,400mW	
	1c 24V 20A N.O. / 20A N.C. / 30V	24V DC 1,800mW	Go To Overview »
CM  20 x 15 x 22mm 1a 1c	» Small substitute for Mini-ISO relay » Micro-ISO terminal type		Plug-in THT 	35A N.O. / 20A N.C. / 16V	12V DC 1500mW	
	35A N.O. / 20A N.C. / 32V	24V DC 1800mW	Go To Overview »
CV-N  22.5 x 15 x 15.7mm 1a 1c	» Low profile » Low temperature rise » Low sound pressure level » RTIII (IP67) available 20A N.O. / 10A N.C. / 14V	24V DC 800mW	Plug-in 			Go To Overview »
CB  26 x 22 x 25mm 1a 1c	» 40A switching current at 85°C » Mini-ISO type terminals » High shock resistance » High thermal resistance		Plug-in THT  (PCB standard type)
	Standard 40A N.O. / 30A N.C. / 16Va	12V DC 1400mW	
	H Type 70A N.O. / 16V	12V DC 1800mW	
	24V Type 40A N.O. / 30A N.C. / 32V	24V DC 1800mW	Go To Overview »

Automotive Relays I Plug-in Relays

Series	Features	Coil	Mounting (bottom view)
CN-L  91.5 x 38.5 x 85.3mm 1a	» Continuous carrying current of 150A@85°C, 80A@125°C » Max. ambient temperature 125°C » Can be installed to engine compartment (IP54) » Version without fasten lug available » Overcurrent (> 2000A) trip function » No additional fuse needed 150A N.O. 0W Latching relay	12V DC 30W	Plug-in/ Screw Screw terminal  Go To Overview

High Voltage DC Relays

With increasing concern for the environment, the market for eco-friendly vehicles is expanding. To contribute to a greener world and environmental compliance regulations, we provide a broad range of solutions for hybrid to full-electric vehicles. We aim at contributing to the electrification and safety of cars by offering EV relays (DC contactors) achieving high-capacity DC cutoff & space saving and Automotive relays capable of large current/voltage cutoff.
Charging the next generation of mobility.

Automotive Relays I High Voltage DC Relays

Series	Features	Coil	Mounting
EV-A  82.6 x 73.0 x 23.0mm 1a	» One of the smallest and lightest in 250 A class » 8,000 A short circuit tolerance » High cut-off capacity 1,800A at 500V DC without contact polarity » Vertical and horizontal type available 250A 500V	12V DC 6000mW	Screw terminal  Go To Overview
EV-G, EV-H high short-circuit capacity  66.8 x 49.7 x 37.9mm  78 x 40 x 48.1mm 1a	» High short-circuit capacity type » AEVH (100A) available with lead wire 1 60A 450V 2 100A 450V	12V DC 5200mW 5400mW	Screw terminal Go To Overview
EV-S quiet  76 x 36 x 72.3mm  77 x 67.8 x 37.7mm 1a	» DC type with sealed capsule, mainly for hybrid vehicles » Very quiet operation » Small size and light weight » Blow-out magnets allow small arcing space » Safety construction » High contact reliability » Standard type for horizontal mounting available 60A 450V	12V DC 4500mW	Screw terminal Screw terminal  Go To Overview

Automotive Relays I High Voltage DC Relays

Series	Features	Coil		Mounting
EV  1 66.8 x 49.7 x 37.9mm 2 78 x 40 x 48.1mm 3 82.8 x 40 x 79mm  4 75.5 x 40 x 80mm 5 95 x 45 x 86.4mm 6 111 x 63 x 75mm 1a	» Sealed capsule for xEV » Compact size » Blow-out magnets allow small arcing space » Safety construction » High contact reliability	12V DC	24V DC	Screw terminal Faston terminal
	1 10A 450V	1240mW		
	2 20A 400V	3900mW		
	3 80A 450V	4200mW		
	4 120A 450V	4200mW		
	5 200A 450V	6000mW		
	6 300A 450V	3600mW Inrush: 37.9W (~0.1 sec.)	3800mW Inrush: 44.4W (~0.1 sec.)	Go To Overview »
EBN  82.6 x 73.0 x 23.0mm 1a	» Low height for mounting within battery packs » Max. 1,500 A 60 V DC switching off possible 100A 60V	12V DC 2000mW		Plug-in Go To Overview »
ECN  29.0 x 25.0 x 28.9mm 1a	» Small pre-charging relay » Easy connect plug-in terminal 15A 400V	12V DC 1400mW		Screw terminal Go To Overview »
